

March 26, 2019

Good afternoon:

The Department of Environmental Protection has approved operations of the Diakon Wilderness Center's Dining Hall water system. I am happy to report that this notification means that we are meeting all the Department of Environmental Protection's Safe Drinking Water Act requirements and no longer need to serve bottled water or follow the boil-water notice in the dining hall kitchen area.

We will continue to provide students with bottled drinking water to consume in the classroom/gymnasium area of our campus as we continue to work on approval of our second system which serves this area of our campus. We expect to complete our final requirements expeditiously and I will send out a final notice when we have final approval of our second system.

We are required to send out the attached order updating families with this information. This letter will be sent home with students today.

Jason Brode
Executive Director
Diakon Youth Services - Central Region
